

## Combined Lighting / HVAC Controls

The combined plate concept was created as an alternative to the fitting of separate plates for different applications (Lighting, Blind Controls, HVAC Controls) We provide a single bespoke solution to fulfill both the aesthetic and operational design requirements for any project.

Primarily used in meeting rooms where there can be potentially 3 or 4 different switchplates from different suppliers of lighting and blind controls, we combine their controls onto a bespoke plate together with the HVAC controls which we manufacture.

The majority of the combined plates are made from brushed stainless steel or a powder coated finish but we can also supply any electroplated finish and we work closely with the major Electrical lighting switchplate manufacturers to ensure that we can match any specified finish.

Manufacturers also have many different variations of plate styles (eg: rounded corners / square corners, different fixing screw types, clip-on screwless plates, etc ). Wherever possible we will manufacture the plates to match or, alternatively, we will buy blank plates from the manufacturer.

We will also supply all of the associated components (knobs, sensor housings etc ) in a matching finish.
